inside the tube spilling out. It is better to cover the tub with the lid.

## MAINTENANCE

1. Please pull the plug out of the socket (don't touch the socket when your hands are wet) and put it at the correct position.
2. After discharging the water in the tub, please move the switch from discharge to standard.
3. Clean the de-hair device:
  - 1) Take out the de-hair set, dismantle it with a finger pressing the inside bottom.
  - 2) Put the de-hair set in water to clean.
  - 3) After cleaning, restore the de-hair device, insert it into the slot under the water level side board. A click should be heard.
4. Pick up the water introducing tube and hang the discharging tube.
5. Clean the housing of the machine, wipe it thoroughly, and wipe out the dirt with chemicals, such as alcohol, eradicant, acetone, gas, etc. When it is very dirty, please use neutral liquid soap to clean.
6. Close the lid, place the machine at the ventilation in the room.

⚠ Water is not allowed to enter the inner part of the machine directly. Otherwise, the electric motor will be conducted by electricity. This is the real reason why sometimes that electric stroke may happen.
